

Degree Apprenticeships in Construction

An apprenticeship is paid employment with a structured programme of learning for individuals who are early in their career, looking to upskill or seeking a career change. Apprentices spend at least 20% of their working hours completing off-the-job learning which leads to a nationally recognised qualification.

The off-the-job learning for a Degree Apprenticeship usually takes place at a university and lasts between three and six years. On successful completion, Degree Apprentices are awarded either a bachelor's degree (level 6) or a master's degree (level 7).

How to Get Started
